

Year 4 Step 3 Discovery Box Video Transcript

The crows have built a simple nest of sticks which is quite big and roomy enough for both parents to settle in the nest with their large young crows at night.

The crows are very good parents and one of them, and sometimes both of them, visit their young crows to check that they're OK and bring food about every 15 minutes.

The crows have built their nest up high in this gum tree, and thankfully a cat would find it very hard to climb up so high to the nest.
